SOUND REQUIREMENTS

INTRODUCTION

If you have any problems, or if any of the items listed below will not be available, please contact us as soon as possible at least one month prior to the event. **If no contact is made, we'll assume that this rider will be fulfilled to specification.**

Please also look at our web page, www.SchawaynaRaie.com as the tech rider on this page is regularly updated, whereas if you have a paper rider from the agent, this can be up to 18 months out of date.

The following sound specification is detailed, but fairly simple. **The emphasis throughout is on quality.** We attempt at all our performances to deliver a sound which is as high quality as possible, and we rely on this contract to make sure that everything we need to accomplish this is available.

GENERAL

SRaie requires a sound system of sufficient size for the venue. We like the stage setup as close to the audience as possible. The system shall be capable of producing a clean, undistorted 'A' weighted SPL of 85-90dB average, 98dB peak, as measured at the mix position, with a frequency response of 50hz- 18Khz +/-3dB. This is generally the SPL that SRaie will perform at, and if this will cause problems, please let us know in advance. Quality is much more important than quantity. **The system loudspeakers must be configured as a Left / Right stereo pair;** center clusters, balcony fills etc., are fine providing they are in addition to the main L&R

speakers – any such additions should be independently controllable from the mix position.

The system and its components shall be in full working order, with no buzzes, hums, beeps, crackles, clicks or other extraneous noises, and will be free from radio interference.

Prior to band load in, system should be up and running; mic lines, monitors, mic stands in place; XLRs labeled with relevant channel numbers; compressors inserted and checked; line check should be completed, but please leave spare cable length in case some rearranging is necessary. Cable runs should as far as possible be made behind the musicians, or far downstage at the lip of the stage. A runner, rubber mat or other covering should be provided for the cables in the area marked 'DANCERS ENTRY', **but please don't tape anything down until after sound check.**

SRaie travel with her own FOH engineer for full band live performances, and **free access to all parts of the sound system should be afforded them.** SRaie require that all inputs be reserved for their exclusive use from sound check to end of show. If there are other performers on the bill, separate channels must be used.

MIX POSITION

The position of the sound console is of utmost importance, and control rooms, booths etc., are absolutely unacceptable for this purpose.

VERY IMPORTANT – THE MIX POSITION MUST BE LOCATED IN THE HOUSE

Ideally, the console should be placed at the center of the L&R speakers, about halfway between front and rear of the house, forming an equilateral triangle, with the speaker enclosures and the mix position at the apexes, with line-of-sight between speakers and control position. While this will not always be possible, under no circumstances should the console be placed further left than the left speakers, or further right than the right speakers. The FX & control racks should be easily accessible from the console and

should not be positioned under it. Sufficient illumination for desk and racks should be provided as should a stool or chair for operator.
